

This exercise augments classroom discussion on precise technical writing.

1. List the members of your group below. Underline your name.
2. The task is to describe the heapsort algorithm for CS sophomores, in detail sufficient to enable implementation. Discuss the outline and general plan with your group and summarize the result. (Check if you wish to substitute a different algorithm.)

3. Using Question 2 as a guide, describe heapsort.

[additional space for answering the earlier question]

4. Critique of the above:
